# TECHFUND`s Tech team MVV

# Mission : "R&R"

We help entrepreneurs create businesses: rapid & reliable.

# We want to become creators of new technology.

*Create "processes & tools" to "create & secure" digital products in a fast and reliable way.*

*We believe we are capable of solving problems of the fast-moving world.*

# 5 Core Values

1. Team > Everything else
   ○ We are one single unit "TECHFUND" not a frontend/backend/ops team. Each member represents "TECHFUND" all the time by their conduct.
   ○ Once someone has become a member: We trust, help & guide each other, no matter the situation.
   ○ The aim of the team is one: "Growth"

# 5 Core Values

2. Numbers don't lie, numbers don't have an opinion.
   ◦ Data will be valued over personal assumptions. We can have a bias because of basic human tendencies. They lead to incorrect decisions, which can harm in long term. Hence as a team, we should always put measurements in place and discuss based on facts & data.

# 5 Core Values

3. 10 Perfect features > 100 imperfect ones
   - ○ If TECHFUND has released one product feature, it should mean it will work in all the conditions. TECHFUND name must become synonynmous with quality.

# 5 Core Values

4. Continuous learning
   - ○ ALWAYS be learning. If we have to become "creators" and not only "users" of technology, we must keep up with upcoming technologies.
   - ○ Have you read about something nice recently? Or tried to play with some new technology? Share the article or your GitHub link!

# 5 Core Values

5. Focus on client

    ◦ Focus on what the client "actually" want to achieve, everything else will follow automatically.
